

Fixed and Removable Appliance Management
Crown and Bridge, Orthodontic Brackets, Implants, Partial, Dentures

3M™ ESPE™ PerioMed™ 0.63% Stannous Fluoride Concentrate

Patients with soft tissue inflammation: Use nightly until the condition clears and then once a day or as recommended to maintain soft tissue health.

Dialogue with patient:

Fixed Appliance: *Inflammation can cause irritation and complications that could shorten the life of your _____. Soft tissue health must be maintained. Dr/RDH_____ recommends that you use PerioMed rinse to protect your investment. Rinse with PerioMed nightly until the redness and bleeding stop. Put two pumps of PerioMed rinse in the cup, fill the cup with water and rinse for 1 minute. Expectorate (spit). The bottle will last 2 1/2 months. The fee is \$_____.*

Removable Appliance: *Inflammation can cause irritation and complications with the use of your appliance. Soft tissue health must be maintained. Dr. _____ recommends that you use PerioMed rinse to protect your investment. At night remove your appliance, put two pumps of PerioMed rinse in the cup, fill the cup with water and rinse for 1 minute. Expectorate (spit), then place your appliance back in your mouth. The bottle will last 2 1/2 months. The fee is \$_____.*

Cosmetic Restorations

Composites, Veneers, Crowns, and Bleaching

The number one reason why restorations fail is secondary decay

3M™ ESPE™ Clinpro™ 5000 1.1% Sodium Fluoride Anti-Cavity Toothpaste

Using Clinpro 5000 anti-cavity toothpaste will help strengthen teeth to help prevent cavities around restorations.

Dialogue with patient:

Using abrasive toothpastes can dull or damage the appearance of your _____. Clinpro 5000 is a prescription strength fluoride toothpaste designed to increase caries protection while gently cleaning your _____.

Dr _____ recommends this medicated toothpaste to protect your investment. Place a pea size amount on your toothbrush. Brush, expectorate (spit) and do not rinse (if possible) once a day or as recommended. This tube should last 6 months. The fee is \$_____.

General Sensitivity

Vanish White Varnish

Dentinal hypersensitivity is a condition rather than a disease. When you have ruled out various conditions as a possible cause, occluding the tubules is the focus. Most over the counter sensitivity toothpaste contains 5% Potassium Nitrate which is a numbing agent that treats the symptoms only. Treat the cause not the symptom.

Dialogue with patient:

Habits in our lives can damage our teeth causing sensitivity. Dr. _____ recommends Vanish which is a fluoride coating that we'll place on your teeth here in the office. You will have that just cleaned feeling when you brush the coating off in 6 hours or as recommended.

Localized Sensitivity

3M™ ESPE™ Vanish™ XT Extended Contact Varnish

If sensitivity is localized to an exposed root area, and other factors (cracks, caries, abfractions) are ruled out, sealing the tubules is the focus. Most over the counter sensitivity toothpaste contains 5% Potassium Nitrate which is a numbing agent that treats the symptoms only. Treat the cause not the symptom.

Dialogue with patient: Show patient exposed root.

Habits in our lives can damage our teeth causing sensitivity. Dr. _____ recommends Vanish XT, a site-specific protective coating, to treat the sensitivity. We will place this protective coating on here in the office to seal the exposed roots. This coating will relieve the sensitivity immediately and will last 6 months or longer.

Gingivitis

3M™ ESPE™ Peridex™ Chlorhexidine Gluconate 0.12% Oral Rinse :

Gingivitis can lead to periodontitis; Gingivitis is reversible while periodontitis is not.

Peridex rinse – 64 oz for in-office use: Pre-procedural rinse, irrigation, during and after procedures.

Peridex rinse - 4 oz: Use as recommended for one week before crown preparations, extractions, and scaling/root planing to reduce gingivitis and bleeding.

Dialogue with patient:

We are concerned about the inflammation of your soft tissue. This condition could escalate to serious dental problems. Dr. _____ recommends rinsing for one week with prescription strength Peridex rinse. This antimicrobial will help keep the inflammation and infection under control. We will recommend Peridex rinse as needed until the inflammation clears. You must also brush and floss regularly. The fee is \$_____
